VERDEZYNE RELOCATES CORPORATE HEADQUARTERS

LAGUNA HILLS, Calif.— January 30, 2009 –[Verdezyne, Inc.](http://www.verdezyne.com), a synthetic biology company focused on the industrial biotechnology markets, today announced the company is relocating its corporate headquarters. The company is moving all operations to 2715 Loker Avenue, Carlsbad, Calif.

The 11,000 square foot facility location in northern San Diego County, one of the leading U.S. biotechnology centers, will afford new recruiting opportunities while accommodating current employees. The facility features an expanded laboratory space. The move is scheduled to be completed by the end of January.

Verdezyne employs its biological expertise and proprietary advanced computational algorithms to design and synthesize novel gene libraries for engineering proteins, metabolic pathways, and microorganisms to manufacture platform chemicals and biofuels.

About Verdezyne

Founded in 2005, Verdezyne, formerly known as CODA Genomics, is a privately-held company that integrates its proprietary core technologies to direct the evolution of novel metabolic pathways for cost effective commercial production of biofuels and platform chemicals. Investors in Verdezyne include OVP Venture Partners, Monitor Ventures, Tech Coast Angels and Life Science Angels. For more information on Verdezyne, visit www.verdezyne.com.
